**A QUALITY SEAFOOD PRODUCER**

NEGARA BRUNEI DARUSSALAM

## GOLDEN CORPORATION SDN BHD

Negara Brunei Darussalam

### A Quality Seafood Producer

Golden Corporation Sdn Bhd's "Multi-Purpose Marine Resources Processing and Business Centre" commenced operations in June 2012 and prides itself as the only fully-integrated producer of seafood-related products in Brunei. It is also the first company to produce organic feed and breed organic blue shrimp (*L. Stylirostris*).

The company operates its own fishing fleets, hatchery, shrimp farms and raw processing plant. The plant produces frozen fish, frozen shrimp, surimi, fish meal, fish oil and aquatic feed. It also houses an ice-making facility. Golden Corporation offers advice, assistance and technical expertise to local aqua-farmers and fishermen. At present, the company caters to the domestic and international markets.

Golden Corporation highly values product quality, safety and traceability. To this end, the company has several Accreditations:

- SGS ISO 22000:2005
- SGS HACCP Codex Alimentarius
- China/EU Organic
- Dolphin Safe Corporate Policy

### Mission & Vision

The company aims to be the leading and largest regional seafood processing group with complete end to end facilities, providing consistently high-quality seafood products. The company's objectives are:

- To support the Bruneian government's economic diversification program away from the dominant oil and gas industry, as well as the creation of local employment opportunities.
- To support and expedite the growth of the local fisheries industry.
- To create an additional income stream for the local fishermen from their excess and unmarketable fish, thus eliminating wastage.
- To contribute and enhance the level of national food security and self-sufficiency.

The company is also working to reduce marine pollution and maintain the natural habitats and ecosystem of Brunei, including building a sustainable and healthy marine and fisheries industry.

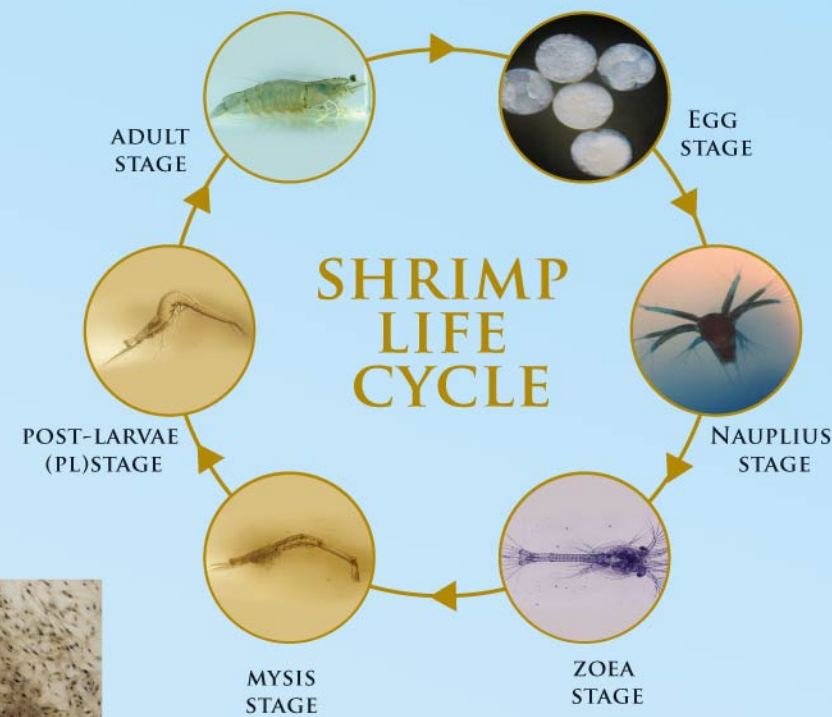

## AQUACULTURE HATCHERY

We have developed a hatchery specifically for broodstock, blue shrimp fry and sea-bass fry, making us the largest producer and supplier for Blue Shrimp and Sea Bass fry in Brunei Darussalam.

The Blue Shrimp fry are spawned, hatched and grown in the hatchery before they are transported to our farms and sold to other local farms in Brunei. Whereas, Sea Bass Fry are also spawned, hatched and grown to the correct size, then are sold to local aquaculture farmers.

## SHRIMP FARM

Brunei Darussalam has a clean environment with more than 70% still covered in tropical virgin rainforest and a large coastal fishing area, amounting more than 7 times the physical size of Brunei itself. As this works to our advantage, we have become the largest and leading Seafood Company in Brunei Darussalam, providing top quality seafood products, generating organic blue shrimp as our primary product.

As such, we have over 100 hectares of cultured areas just for blue shrimp farming. As with our strict standard and procedure on the whole, from spawning to breeding to even the type of feed used, our Blue Shrimp is certified by the renowned Ecocert Organic Certification.

## MARINE RESOURCES PROCESSING AND BUSINESS CENTRE

The Marine Resources Processing & Business Centre facility helps integrate the whole Aquaculture Industry, as the first of its kind in Brunei Darussalam. Together, both companies are responsible for the fundamental build up of this Aquaculture Industry in Brunei.

For efficient storage and cargo, having always to ensure that the freshness of our seafood products to the consumers are locked in, we own the most modern freezing state-of-the-art equipment, such as the Contact Freezer, Air Blast Freezer and the Double Spiral Freezer, to name a few.

In addition, our Marine Resources Processing & Business Centre has its very own Laboratory, where chemical and microbiological tests are carried out on all of our products.

## COLD STORAGE

## LABORATORY

## ICE-MAKER PLANT

## SHRIMP

Once harvested, the blue shrimps are sent to the processing centre, where the sorting machine sorts them according to its size and they will be processed by the latest technical equipment. It will then be weighed, packaged and instantly frozen. Once it is frozen, it will go through a metal detector to ensure that there is no trace of metal content, before it is sealed and delivered.

## SURIMI

Our company also produces high grade surimi in which the entire process is fully automated. The raw materials for surimi are mainly Itoyori, Kintokidae and some other white-flesh fishes.

## FISH MEAL

Golden Corporation is the first company in Brunei to produce Fish Meal where excess and unmarketable fishes are reprocessed into value products. This production has helped in reducing marine wastage and pollution.

## AQUATIC FEED

With the production of fish meal, the company also produces its own aquatic feed, which is known as Gold Feed for consumption in its own shrimp farms and also act as a feed supplier to aqua-farmers.

## FISHING

Apart from Blue Shrimp farming, we have also invested in purse seiner fishing vessels equipped with the latest technologies. Our primary catches are tuna and our vessels are equipped with 'dolphin-safe' sonar system, in which, the safety of the dolphins can be ensured during all fishing activities, achieving the awarded dolphin-safe certificate from The Earth Island Institute.

The main catch from these purse seiner vessels fishing activities carried out in deep water zones, the Yellow-Fin tuna, which are migrating fish and only passes through Brunei waters, greatly reduces over fishing.
